

THE FUTURE OF DIGITAL FINANCIAL REPORTING

Inline XBRL transforms the reporting requirements by merging the **human-readable** HTML file with its respective **machine-understandable** data contained in a company's XBRL exhibit into a single report. Not only does this decrease the risk of errors in reporting and increase the efficiency of a company's existing reporting process, but it also provides the opportunity to bring the data alive!

Imagine that you can now analyze data and read the contextual discussion of that data in the same document in your browser.

idaciti's inline XBRL viewer combines functionality to view, filter and search with instant & interactive trending and benchmarking capability.

With idaciti's inline XBRL viewer, you can run extensive validation checks **before** you file with the SEC.

global

The idaciti iXBRL viewer is designed to support iXBRL filings from across the globe

search

Labels, Definitions, Dimensions & Disclosure Requirements

filter

Custom tags, Negative Numbers & Reporting Periods

validations

DQC: XBRL US Data Quality checks
EFM: SEC EDGAR Filing Manual checks
Large variances and tag changes (added or removed) alerts

instant analysis

Perform instant trending analyses and benchmark against any companies within the context of the filing

In order to harness the true power of XBRL, it requires vision beyond the vision. Imagine an application that can take you beyond the historical data and analysis, beyond at-will customized interactive data - an application that feels like a hyperlink to your own virtual reality of financial data.
